DATE MAILED: 11/16/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/777,002

Applicant(s)

MOULTON ET AL.

Examiner

Hassan Phillips

Art Unit

2151

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 August 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 and 12-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7 and 12-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. This action is in response to amendments received on August 13, 2004.

Claim Objections

1. After consideration of the amendments made to claim 1, the corresponding objection has been withdrawn.

Claim Rejections - 35 USC § 112

1. After consideration of the amendments made to claims 14 and 23, to address the antecedent basis issues, the Examiner has withdrawn the rejections to claims 14, and 23.

2. In considering the amendments made to claim 15, the Examiner sustains the previous rejection to claim 15. Although the Applicant made changes to line 6 to correct antecedent basis issues, the Applicant failed to make changes to line 4. Appropriate correction is required.

Response to Arguments

1. Applicant's arguments with respect to claims 1-30 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11, 13-30, are rejected under 35 U.S.C. 103(a) as being unpatentable over Carter et al. (hereinafter Carter), U.S. patent 5,987,506.

3. In considering claim 1, Carter discloses a data storage system comprising:
- a) A plurality of storage nodes, each node existing at a physical location and having one or more associated contexts, (col. 6, lines 7-12);
 - b) Interface mechanisms coupled to each storage node for communicating storage access requests with the storage node, and data storage management processes that select one or more of the storage nodes to serve a data storage request based at least in part upon the particular contexts associated with each of the storage nodes, (col. 7, lines 43-49).

Although the disclosed system of Carter shows substantial features of the claimed invention it fails to expressly disclose: The context including political, economic, geographic, or topological context.

Nevertheless, having the context include political, economic, geographic, or topological context is a field of use limitation, and not patentable distinction.

Thus, it would have been obvious to one of ordinary skill in the art associated with a political field to modify the teachings of Carter to show the context include political context. Similarly, it would have been obvious to one of ordinary skill in the art associated with economic, geographic, or topological fields, to modify the teachings of Carter to show the context including economic, geographic, or topological contexts. This would have shown how the teachings of Carter could be used in the respective fields.

4. In considering claim 2, the disclosed system of Carter further teaches the data storage management processes comprising computer-implemented processes executing in at least one of the storage nodes. See col. 6, lines 52-58.

5. In considering claim 3, the disclosed system of Carter teaches the data storage management processes comprising computer-implemented processes executing in all of the storage nodes. See col. 6, lines 52-58.

6. In considering claim 4, it is implicit in the system taught by Carter that the data storage requests are associated with a set of desired criteria. See col. 6, lines 7-14.

7. In considering claim 5, it is implicit in the system taught by Carter that the data storage requests are associated with a set of desired criteria and the data storage management processes comprise processes for matching the desired criteria to the contexts of the storage nodes. See col. 6, lines 7-14.

8. In considering claim 6, the disclosed system of Carter provides a means for the data storage management processes to present a unitary logical volume of data storage to external devices generating the storage access requests to the selected one or more storage nodes. See col. 7, lines 61-64.

9. In considering claim 7, the disclosed system of Carter further provides a means for selecting one or more storage nodes such that the contexts associated with the unitary logical volume satisfies the desired criteria associated with the one or more storage nodes. See col. 7, lines 64-67.

10. In considering claim 13, the system disclosed by Carter further comprises authentication mechanisms coupled to the interface mechanisms for authenticating storage nodes before communicating storage requests. See col. 41, lines 1-6.

11. In considering claim 14, Carter discloses a method of managing distributed data storage comprising the acts of:

- a) Providing a plurality of distributed storage nodes, (col. 6, lines 37-43);
- b) Receiving a data storage task in one of the storage nodes, (col. 6, lines 10-12);
- c) Determining desired criteria associated with the data storage task, selecting one or more of the plurality of storage nodes having an associated context satisfying the desired criteria, and executing the storage task in the selected storage node, (col. 6, lines 12-17).

Although the disclosed system of Carter shows substantial features of the claimed invention it fails to expressly disclose: The context including political, economic, geographic, or topological context.

Nevertheless, having the context include political, economic, geographic, or topological context is a field of use limitation, and not patentable distinction.

Thus, it would have been obvious to one of ordinary skill in the art associated with a political field to modify the teachings of Carter to show the context include political context. Similarly, it would have been obvious to one of ordinary skill in the art associated with economic, geographic, or topological fields, to modify the teachings of Carter to show the context including economic, geographic, or topological contexts. This would have shown how the teachings of Carter could be used in the respective fields.

12. In considering claim 15, the disclosed method of Carter further teaches at least two storage nodes collectively satisfying desired criteria. See col. 7, lines 8-38.

13. In considering claim 16, the disclosed method of Carter further teaches at least two storage nodes located in different geographical locations. See col. 3, lines 1-5.

14. In considering claim 17, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different areas of a single data center. See col. 3, lines 1-5.

15. In considering claim 18, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different areas of a single data center, and connected via different network backbones. See col. 3, lines 1-5.

16. In considering claim 19, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different data centers. See col. 3, lines 1-5.

17. In considering claim 20, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different cities. See col. 3, lines 1-5.

18. In considering claim 21, the disclosed method of Carter provides a means for the selected nodes to comprise at least two storage nodes in different political jurisdictions. See col. 3, lines 1-5.

19. In considering claim 22, the disclosed method of Carter provides a means for the selection to be based upon socio-economic attributes of the physical location of the data storage node. See col. 6, lines 12-14.

20. In considering claim 23, it is implicit in the method disclosed by Carter that the step of selecting comprises matching the desired criteria to a context associated with a storage node. See col. 6, lines 12-17.

21. In considering claim 24, the disclosed method of Carter further teaches storing data according to a distributed parity scheme analogous to parity distribution found in RAID subsystems. See col. 23, lines 12-27.

22. In considering claim 25, it is implicit that the method of Carter provides a means for the parity paradigm to comprise an N-dimensional parity mechanism where "N" is greater than three. See Carter, col. 8, lines 39-50.

23. In considering claim 26, the disclosed method of Carter provides a means for storing data in a manner such that the data stored in any one storage node cannot be used in any meaningful fashion without the availability of some or all of the data stored in other storage nodes. See Carter, col. 7, lines 8-38.

24. In considering claim 27, Carter discloses a data storage service comprising:

- a) Receiving data storage requests and allocating capacity within network-accessible storage devices to handle the received request, (col. 12, lines 40-43);
- b) Maintaining a state information data structure including state information describing the contexts of the network-accessible storage devices, (col. 13, lines 19-58).

Although the disclosed system of Carter shows substantial features of the claimed invention it fails to expressly disclose: The context including political, economic, geographic, or topological context.

Nevertheless, having the context include political, economic, geographic, or topological context is a field of use limitation, and not patentable distinction.

Thus, it would have been obvious to one of ordinary skill in the art associated with a political field to modify the teachings of Carter to show the context include political context. Similarly, it would have been obvious to one of ordinary skill in the art associated with economic, geographic, or topological fields, to modify the teachings of Carter to show the context including economic, geographic, or topological contexts. This would have shown how the teachings of Carter could be used in the respective fields.

25. In considering claim 28, the disclosed service taught by Carter further comprises detecting a change in the state information associated with at least one network-accessible storage device, and updating the state information associated with the at least one network-accessible storage device to include the change in state information. See col. 13, lines 36-58.

26. In considering claim 29, the disclosed service taught by Carter further comprises dynamically re-allocating capacity within the network-accessible storage devices in response to detecting a change in their associated contexts. See col. 12, lines 22-28.

27. In considering claim 30, the disclosed service taught by Carter teaches dynamic re-allocation in the absence of externally generated data storage access requests. See col. 12, lines 22-28.

28. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Carter in view of McClain, U.S. patent 5,794,254 (supplied by applicant).

29. In considering claim 12, the disclosed method of Carter further teaches:

- a) Security mechanisms when communicating, (col. 4, lines 38-50).

Although the disclosed system of Carter shows substantial features of the claimed invention, it fails to expressly disclose:

- a) Encrypting storage messages before communicating.

Nevertheless, encrypting messages before communicating was well known in the art at the time of the present invention. This is exemplified in a similar field of endeavor where McClain discloses a method and system for backing up computer files at a remote site comprising:

- a) Encrypting a storage message before communicating, (col. 6, lines 48-53).

Given the teachings of McClain it would have been apparent to one of ordinary skill to modify the teachings of Carter to show encrypting storage messages before communicating. This would have provided a secure and safe means for storing data over a network, while preventing the data from being read by unauthorized individuals.

Conclusion

1. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hassan Phillips whose telephone number is (571) 272-3940. The examiner can normally be reached on M-F 8:00am-5:00pm.

Art Unit: 2151

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarni Maung can be reached on (571) 272-3939. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
